TABLE 40A: ABOUT 977 GENES UP-REGULATED IN STOMACH CANCER
Table 40A 6sts about 977 genes up-regulated in stomach cancer compared to normal adult fissues. These were selected from 59680 probesets on the Affymetrix/Eos Hu03
GeneChip array such that the ratio of "average" stomach cancer to "average" normal adult fissues was greater than or equal to 2.0. The "average" stomach cancer level was set to the 90th percentile amongst various non-malignant tissues. In order to remove gene-specific background levels of non-specific hybridization, the 15th percentile value amongst various non-malignant tissues was subtracted from both the numerator and the denominator before the ratio was evaluated.

TABLE 41A: ABOUT 634 SEQUENCES UP-REGULATED IN STOMACH CANCER
Table 41A lists about 634 genes up-regulated in stomach cancer compared to normal adult fissues that are likely to be extracellular or cell-surface proteins. These were selected as for Table 40A and the predicted protein contained a structural domain that is indicative of extracellular localization (e.g. ig. th3, egf, 7tm domains). Predicted protein domains are 10

TABLE 43A: ABOUT 339 GENES UP-REGULATED IN STOMACH CANCER
Table 43A lists about 339 genes up-regulated in stomach cancer compared to normal stomach that are likely to be extracellular or cell-surface proteins. These were selected as for Table 42A and the predicted protein contained a structural domain that is indicative of surface or extracellular localization (e.g. ig. th3, egt. 7tm domains). Predicted protein domains

20

TABLE 44A: ABOUT 314 GENES DOWN-REGULATED IN STOMACH CANCER
Table 44A lists about 314 genes significantly down-regulated in stomach cancer compared to normal stomach. These were selected as for Table 42A, except that the numerator and denominator were switched.

TABLE 45A: ABOUT 947 GENES UP-REGULATED IN STOMACH CANCER COMPARED TO NORMAL ADULT TISSUES

Table 45A lists about 947 genes up-regulated in stomach cancer compared to normal adult tissues. These were selected from 59680 probesets on the Aflymetrix/Eos Hu/O3

GeneChip array such that the radio of "average" stomach cancer to "average" normal adult tissues was greater than or equal to 2.5. The "average" stomach cancer level was set to
the 90th percentile amongst various atomach cancers. The "average" normal adult tissue level was set to the 90th percentile amongst various non-malignant tissues. In order to
remove gene-specific background levets of non-specific hybridization, the 15th percentile value amongst various non-malignant tissues was subtracted from both the numerator and
the denominator before the ratio was availuated.

TABLE 48A: ABOUT 426 GENES UPREGULATED IN MELANOMA RELATIVE TO NORMAL BODY TISSUES
Table 48A lists about 426 genes upregulated in melanoma relative to normal body tissues. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Placy:

Unique Eos probeset identifier number
ExAcon:

Exemplar Accession number, Genbank accession number
UniquenelD:

Uniquene gene title

Uniquene gene title

Rt:

Mean of metanoma Als divided by the mean of normal fissue Als, where the minimum value for the numerator and denominator was set to 1.0 10

15

Unique Eos probeset identifier number
Exemplar Accession number, Genbank accession number
Unigene number
Unigene gene title
Mean of melanoma Als divided by the mean of normal tissue Als, where the minimum value for the numerator and denominator was set to 1.0

#### WO 03/025138

Table 49A fists about 1127 genes upregulated in primary melanoma and/or melanoma metastases relative to normal body fissues. These genes were selected from 59680 probesets on the Eos/Affymetrix Hut03 Genectip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (A), a normalized value reflecting the retative level of mRNA expression.

Pkey:

Unique Eos probeset identifier number

ExAcon:

Explain Accession number, Genbank accession number

Unigenel D:

Unique Tite:

Unique Tite:

Unique gene title

St:

90th percentile of primary melanoma and melanoma metastasis Als divided by the 90th percentile of normal tissue Als

90th percentile of primary melanoma and melanoma metastasis Als divided by the 90th percentile of heart, liver, tung, and kidney Als

Cenes were selected from 59680 probesets on the Eos/Affymetrix Hu/03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression. Unique Eos probeset identifier number Pkev: 30 Exemplar Accession number, Genbank accession number UnigenelD: Unigene number Unigene gene title Unigene Title: uniques generous 90th percentile of primary metanoma Als divided by 90th percentile of normal skin Als 90th percentile of primary metanoma Als divided by 90th percentile of normal skin Als, where the 15th percentile of normal tissue Als was subtracted from both R2 35 the numerator and denominator UnigenelD Hs.30743 Unigene Title preferentially expressed antigen in mela Pkay 452838 ExAcon U65011 14.06 13.64 15.56 11.62 NM_001922 NM_000372 Hs.301865 Hs.2053 dopachrome tautomerase (dopachrome delta tyrosinase (oculocutaneous albinism IA) 430377 40 7.98 426555 BE386801 Al186431 trinucleotide repeat containing 3 prostate differentiation factor 12.78 13.80 438549 Hs.21858 15.56 Hs 295638 422424 426600 Hs.171014 VGF nerve growth factor inducible 10.14 22,46 glyceraldehyde-3-phosphate dehydrogenase ESTs, Weakly similar to S51797 vasodilal chondrollin sulfate proteoglycan BEHAB/b 9.33 8.66 7.87 7.25 9.62 430822 AJ005371 Hs.248017 45 Hs.32399 457211 AW972565 438380 T06430 Hs.6194 D13168 Hs.82002 endothelin receptor type B 7.66 7.38 4.63 417355 9.04 phosphatidylserine-specific phospholipas secretogranin II (chromogranin C) 447210 AF035269 AA319146 Hs.17752 Hs.75426 7.32 4.65 413554 50 6.46 415752 BE314524 Hs.78776 putative transmembrane protein 7.00 absent in metanoma 2 NM 004833 Hs.105115 421508 AW960707 AF026939 Hs.148324 Hs.181874 **ESTs** 6.43 6.27 5.92 interferon-induced protein with tetratri 426312 small inducible cytokine sublamily A (Cy hexabrachion (tenascin C, cytotactin) AB012113 6.17 3.70 446921 3.92 7.73 55 Hs.289114 429500 X78565 X72755 6.04 6.04 414812 Hs.77367 monokine induced by gamma interferon 5.89 452973 H88409 Hs.40527 **FSTs** 5.96 5.72 2.50 5.29 ENSP00000251056°:Plasma membrane calcium 402075 436856 A1469355 Hs.127310 **ESTs** 5.68 5.62 5.88 6.30 60 AA663372 Hs.169395 hypothetical protein FLJ12015 425088 AF086120 NM_001394 439310 Hs.102793 FSTe 5.62 5.36 5.36 5.35 5.28 5.23 5.20 5.14 5.09 5.04 4.94 4.88 4.87 4.74 4.74 4.72 4.68 3.30 Hs.2359 dual specificity phosphatase 4 429170 AB000115 AW979187 hypothetical protein, expressed in osteo melanorna differentiation associated prot 4.28 413670 Hs.75470 Hs.293591 409512 65 Homo sapiens cDNA: FLJ22105 fis, clone H 4.64 Hs.27935 hypothetical protein MGC4837 4.31 BF390513 436315 hypothetical protein MGC48370 glycoprotein M6B Hs.332938 Hs.5422 442426 AI373062 4 03 435056 AW023337 Hs.287402 chondroitin 4-sullatransferase 5.52 432828 AB042326 70 AI538226 AK000680 Hs.32976 Hs.266175 guanine nucleotide binding protein 4 phosphoprotein associated with GEMs 4.82 430294 4.35 431639 430838 N46664 Hs.169395 Hs.7155 hypothetical protein FLJ12015 ESTs, Moderately similar to 2115357A TYK 3.68 AA737033 414004 gb:Homo sapiens cig33 mRNA, partial sequifis485 AF026942 AA305159 Hs.17518 Hs.113019 6.29 75 422192 silver (mouse homolog) like 6.00 420208 BE276055 deafness, autosomal dominant 5 hypothetical protein MGC4595 NM_004403 W03476 446006 Hs.13530 Hs.266331 Hs.105924 9.85 5.75 440065 421574 440274 AJ000152 R24595 defensin, beta 2 80 Hs.7122 scrapie responsive protein 1 2.78 AA431323 N88802 Hs.42146 Hs.5422 417166 **ESTs** 4.29

TABLE 52A: ABOUT 204 GENES UPREGULATED IN PRIMARY MELANOMAS RELATIVE TO MELANOMA METASTASES
Table 52A lists about 204 genes upregutated in primary metanomas relative to melanoma metastases. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03
Genechtip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey:

ExAcon:

Unique Eos probeset identifier number

Exemplar Accession number, Genbank accession number

Uniquenel Title:

Unique File:

Vingene gene title

R1:

90th percentile of primary metanoma Als divided by the 90th percentile of metanoma metastasis Als, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator

TABLE 53A: ABOUT 298 GENES UPREGULATED IN MELANOMA METASTASES RELATIVE TO PRIMARY MELANOMAS
Table 53A fists about 298 genes upregulated in melanoma metastases relative to primary melanomas. Genes were selected from 59680 probesets on the Eos/Affymetrix Hut03
Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of
mRNA expression. 15

20

Unique Eos probeset identifier number
Exemplar Accession number, Genbank accession number
Unigene number
Unigene number
Unigene gene tite
90th percentile of melanoma metastasis Als divided by the 90th percentile of primary melanoma Als
90th percentile of melanoma metastasis Als divided by the 90th percentile of primary melanoma Als, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator mRNA express Pkey: ExAcon: UnigeneID: Unigene Title: R1 R2

	TABLE Pkey:	53C:	Unique number corresponding to an Eos probeset

Sequence source. The 7 digit numbers in this column are Genbank Identifier (GI) numbers. "Dunham, et al." refers to the publication entitled "The DNA sequence of human chromosome 22" Dunham, et al. (1999) Nature 402:489-495. Indicates DNA strand from which exons were predicted. Indicates nucleotide positions of predicted exons. Ref:

TABLE 54A: ABOUT 161 GENES UPREGULATED IN PRIMARY MELANOMAS FROM TUMORS THAT LATER METASTASIZED RELATIVE TO PRIMARY MELANOMAS THAT DID NOT METASTASIZE LATER

Table 54A fisis about 161 genes upregulated in primary metanomas from tumors that later metastasized relative to primary metanomas that did not metastasize later. These genes were selected from 59680 probesets on the Ecos/Affymetrix Hud3 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (Af), a normalized vature reflecting the relative level of mRNA expression.

Pkcy: Unique Ecos probeset identifier number

ExAcor: Exemplar Accession number, Genbank accession number 15

TABLE 55A: ABOUT 201 GENES UPREGULATED IN PRIMARY MELANOMAS FROM TUMORS THAT DID NOT METASTASIZE RELATIVE TO PRIMARY MELANOMAS THAT LATER METASTASIZED 15

LATER METASTASIZEU
Table 55A fists about 201 genes upregulated in primary melanomas from tumors that did not metastasize relative to primary melanomas that metastasized later. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative lavel of mRNA expression.

Pkay:
Unique Eos probeset identifier number
ExAcon:
Exemplar Accession number, Genbank accession number
Unique Dr. Unique Eos probeset identifier mumber

Exemplar Accession number, Genbank accession number

20

UnigeneID: Unigene Tide: R1: R2:

Unique number
Unique of the state of Als for primary melanomas that did not metastasize divided by the 90th percentile of Als from primary melanomas that metastasized later
90th percentile of Als for primary melanomas that did not metastasize divided by the 90th percentile of Als from primary melanomas that metastasized later,
where the 15th percentile of normal fissue Als was subtracted from both the numerator and denominator

TABLE 56A: ABOUT 277 GENES UPREGULATED IN MELANOMA METASTASES RELATIVE TO BENIGN NEVI
Table 56A lists about 277 genes upregulated in melanoma metastases relative to benign nevi. Genes were selected from 59680 probesels on the Eos/Affymetrix Hu03 Genechip
array. Gene expression data for each probesel obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA
expression.

Unique Eos probesel identifier number Exemplar Accession number, Genbank accession number Unigene number expression.

TABLE SBA: ABOUT 183 GENES UPREGULATED IN MELANOMA METASTASES FROM PATIENTS WITH LIMITED DISEASE RELATIVE TO MELANOMA METASTASES FROM PATIENTS WITH PROGRESSIVE DISEASE

Table SBA fists about 183 genes upregulated in melanoma metastases from patients with limited disease relative to melanoma metastases from patients with progressive disease.

Genes were selected from 59580 probesets on the Eos/Aflymetrix Hu03 Genechlp array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey:

EVACOT:

Unique Eos probeset identifier number

Exacot:

Unique Proposition of Accession number, Genthank accession number

Unique Tide:

Unique gene of title

Unique gene gene title

R1:

90th percentile of Als for metastases from patients with limited disease divided by 90th percentile of Als for metastases from patients with progressive disease, where the 15th percentile of normal tissue Als was subtracted from both the numerator and denominator

15

TABLE 59A: ABOUT 201 GENES UPREGULATED IN MELANOMA METASTASES FROM PATIENTS WITH PROGRESSIVE DISEASE RELATIVE TO MELANOMA METASTASES FROM PATIENTS WITH LIMITED DISEASE

Table 59A lists about 201 genes upregulated in melanoma metastases from patients with progressive disease relative to melanoma metastases from patients with limited disease.

Genes were selected from 59680 probesets on the Eos/Affymetrix Hur03 Genechlp array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mr0VA expression.

Pkey:

Unique Eos probeset identifier number

Exacon:

Uniquene CD:

Uniquene CD:

Uniquene Title:

Uniquene gene title

R1:

90th percentifie of Als for metastases from patients with progressive disease divided by the 90th percentifie of Als for metastases from patients with limited disease.

R2:

90th percentifie of Als for metastases from patients with progressive disease divided by the 90th percentifie of Als for metastases from patients with limited disease, where the 15th percentifie of normal tissue Als was subtracted from both the numerator and denominator

TABLE 63A: ABOUT 181 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO MELANOMA METASTASES

Table 63A lists about 181 genes upregulated in berign nevi relative to melanoma metastases. Genes were selected from 59680 probesets on the Eos/Alfymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pitery: Unique Eos probeset identifier number

ExAcor: Exemplar Accession number, Genbank accession number

UniquenelD: Uniquene gene title

R1 average of benign nerit Als divided by the 90th percentile of melanoma metastasis AIs, where the 15th percentile of normal tissue AIs was subtracted from both the numerator and denominator. 5

10

TABLE 55A: ABOUT 838 GENES DOWNREGULATED IN BENIGN NEVI RELATIVE TO NORMAL SKIN
Table 55A lists about 838 genes downregulated in benign nevi relative to normal skin. Genes were selected from 59880 probesets on the Eos/Alfymetrix Hu03 Genectrip array. Gene
expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

WO 03/025138
